WHAT IS UNIFORMITY

Uniformity is a third-person RPG set in a city divided into four districts, each with its own unique aesthetic and cultural identity.

In this game, you'll be able to explore every corner of the city, build relationships with its inhabitants, engage in various activities, and complete missions as you progress through a story filled with gang conflicts over territory control, though behind this struggle lies an even greater threat.

Uniformity also features many elements typical of JRPGs, such as a strong and linear narrative divided into three main arcs. It has a well-defined story with pre-established characters who evolve throughout the game. These characters are usually young students going through a personal growth arc. The main character is typically generic and lacks a defined personality, as it's the player's actions that shape their behavior. Visually, the character is kept simple to help players identify with them.

ART DIRECTION

The art style for the game will be a stylized cartoon style, with a lot of comic influence, especially present in interfaces and VFX.

The game will contain vibrant colors and exaggerated designs that enhance the personality of the characters and different regions of the game.

This visual approach seeks to capture the imagination of a child's world. The contrast between the innocent aesthetic and the deeper themes of the game (control, rebellion, identity...) create a rich and unique experience.

Its eye-catching aesthetic also allows it to appeal to a wider audience.

The interface should be eye-catching and stand out with a lot of comic-like style. With great visual effects and vibrant colors. Great examples of these are games such as Splatoon 2 or Persona 5.

The interface should be appealing with the rest of the game, and these styles blend perfectly with the visual style and vibe of the game.

The camera perspective used for the game will be 3rd Person Camera. Commonly used in other games of the same genre.

It allows the player to always see the protagonist, facilitating the perception of growth through expressions and the player's equipment.

3rd Person Camera is a great option for immersion, allowing the player to interact with the world with a character that already existed in that world and blends perfectly with it, enhancing the suspension of disbelief.

NARRATIVE

Multiform linear plot structure is divided in multiple auto conclusive acts.

The narrative of this story takes place in the city of Patchwork City, a city divided into 5 sections:

Commercial District:

This is the central area of the city. There are plenty of stores and people from all parts of the city. It is one of the busiest areas, abounding stores of all kinds, from clothing stores, cinemas and other entertainment venues. There is no housing, but visiting foreigners stay at the Gran Central Hotel, a luxury hotel with all kinds of facilities. Near the hotel there is a train line that connects with the rest of the districts.

Zenith District

Located northeast of the business district. It is the most technology-focused area of the city, with tall buildings and screens everywhere. Signs and neon lights abound on the streets and building facades. In this city the major focus is technological and futuristic, visible both in the activities that can be done and, in the lifestyle, and clothing of the people.

In this district is the T.E.R.A. High School, which stands out for its advanced science and technological development program under the slogan “Build the Future, Be the Future”. A student dormitory is located within the school's facilities.

Vanguard District

Located northwest of the business district. This area of the city boasts the cleanest and safest streets. For its inhabitants, order and rules are the most important. It is a quiet neighborhood with predominantly chalet-type houses and a small commercial area.

In this district is the Regal Heights Academy School, which stands out for being the school with the best average in the exams of all Patchwork City. They have a policy of maximum respect for tradition, discipline and hierarchical order. Their vision of success is based on the structure, duty and reputation of the school and its students under the slogan: “Discipline, Honor, Legacy”. Within the academy facilities there is a dormitory for students.

Debonair District

It is located southeast of the commercial district. It was the most conflicting area of the city in the past, but its inhabitants learned to deal with their problems through artistic expression, which is reflected in the spirit of the city... and the facade of the buildings. Graffiti and other forms of art can be seen as part of the city's ecosystem, perfectly integrated with the style of the buildings. It is also common to see gatherings of people for dance competitions. Much of this section is underground (under the Commercial District) and is accessible from the subway. This area does not have a commercial area, its stores are scattered along the streets. You can appreciate the chaos and little organization of the territory, but with a very unified culture. This area is also famous for its nightlife, it is the area of the city that never sleeps.

In this district is the Union Street High School, known for being the least prestigious of all, but its students seem to be very happy here. Here students are free to express themselves through art, and they have several activities and clubs for this, from freestyle dance club, painting or theater under the slogan: "Be Loud, Be Bold, Be You". The school does not have adequate facilities for student accommodation, so students rest in a residence in the subway part of the school, near the train station.

Moonfare District

It is located southwest of the commercial district. It is the old part of the city, so it has a much older look. The inhabitants of this area of the city have remained faithful to the old customs and traditions of the past. They are very superstitious people and oppose the idea of modernizing the city, as it would be usurping their ancestors, so all the buildings look very old and are full of patches and repairs instead of building new ones. The activities and stores available in this area are related and full of superstitious activities and trinkets that claim to bring luck. There is also an occult booth that claims to be able to tell people's fortunes.

It is also well known for its religious celebrations, where they have a parade of floats throughout the city, organized by the local costalero club.

In this district is the Oracle High School, built on top of an ancient 15th century castle that looks like something out of an old vampire movie. Although its students do not seem to be very studious, surprisingly it is in second place in the ranking of schools in Patchwork City, could it be a matter of luck? This school stands out for its activities such as the Spiritualism Club, meditation and costalero club under the slogan: "Flow Within, Rise Beyond".

To facilitate mobility within each district, they will have a specific mobility vehicle for each one. The change is simply aesthetic to adapt it to each district:

Zenith District: Hoverboard (electric scooter)

Vanguard District: Bicycle

Debonair District: Skateboard

Moonfare District: Rollerblades

Division of the Narrative into 3 Acts

The main plot of Uniformity is divided into 3 acts, following the formula proposed by Syd Field on the basis of screenwriting.

This division, apart from having proven to be very effective, helps the designer to always keep the narrative under control with checkpoints that force the player to have completed certain missions before advancing to the next act.

ACT 1: 10%

Act 1 introduces the player to the Narrative. The story begins with the main character arriving in a new town. As your parents are always busy with work, they have sent you to the city and tasked you with finding a school to attend for the next term, as they are very busy. For this very reason you have never had any friends, as you were constantly moving from city to city, and you think this time will be no different. You are staying in a hotel in the center of the city, the commercial zone (neutral zone between gangs). At this hotel the players will be able to do various activities for a limited time while the player decides which school to attend, such as using the hotel's gym, spa or library facilities. These activities will be available in different versions within each area of the city, so the player will always have the option to perform activities to improve all stats whatever he chooses, although not always in the same way.

During Act 1, the player will have some time to explore the city before the classes begin. During this stage you will get to know the different areas of the city, different characters and the dynamics of the game, which is divided into 4 sections facing each other for the control of the city.

By the end of Act 1 the player will face his first important decision, choosing a school to attend: Regal Heights Academy, Union Street High, T.E.R.A. High and Oracle High.

Once you choose a school, you will move into the dorm in that town.

ACT 2: 70%

Act 2 is the main plot of the game. The player progresses through the story by doing main and side missions and improving his relationships with schoolmates and contacts from other parts of the city to expand his influence. This act covers most of the game.

In the middle of Act 2 you will start investigating strange occurrences happening around town: zombie students. Children who behave like robots, deprived of their freedom, it seems that they have been brainwashed.

You will begin to discover the plot behind the gang wars and the plot of an organization of teachers who plan to implement a unique system of student control. They plan to turn all students into obedient and academically perfect “model students”.

At the end of Act 2 this association will come to light and impose surveillance. Act 3 begins.

ACT 3: 20%

Act 3 is basically the resolution of the main conflict of the plot.

In this act all the long-term missions will be solved, and the player's relationship circles should be complete, at least the ones he has decided to improve.

In this act the city will be changed, the street fights will no longer be against members of other schools, but against members of the teachers' committee who are hunting the kids to reform them. You realize that the inter-district rivalry was nothing more than part of the master plan to divide the city so that no one could get in the way of their plans.

Depending on the actions taken by the player, he will have more or less allies in the later stages of the game, in which the 4 schools will unify with the player at the head to end the oppressive system.

Some teachers with whom you have a good relationship and are advocates of a proactive teaching system will help you to sneak into the headquarters. Which is located in one of the buildings in the commercial area, now converted into the central base of operations of the organization, where the directors of the 4 schools have joined together to carry out their plan.

If you fail the city, and the world may end in a school dystopia.

If you manage to defeat the association, you will see a cinematic ending the story and you can continue playing for about 20-30minutes moving freely around the city and talking to the NPCs with whom you have managed to take your friendship to the maximum, being able to see the change that has suffered the city and them after the battle. Now it looks unified.

Actions per Day System

In order to maintain greater control in the development of the narrative and the evolution of the player, I have decided to establish a system that limits the number of actions that the player can perform per day.

Since the game takes place during the protagonist's school stage, the game will have a progression based on days, following the school calendar, with school days and holidays.

Each day is divided into several stages:

Morning

Mornings are usually busy on school days. During weekends and holidays the player will be able to perform activities during the morning, but it will take time out of his day, consuming one of the actions.

Noon

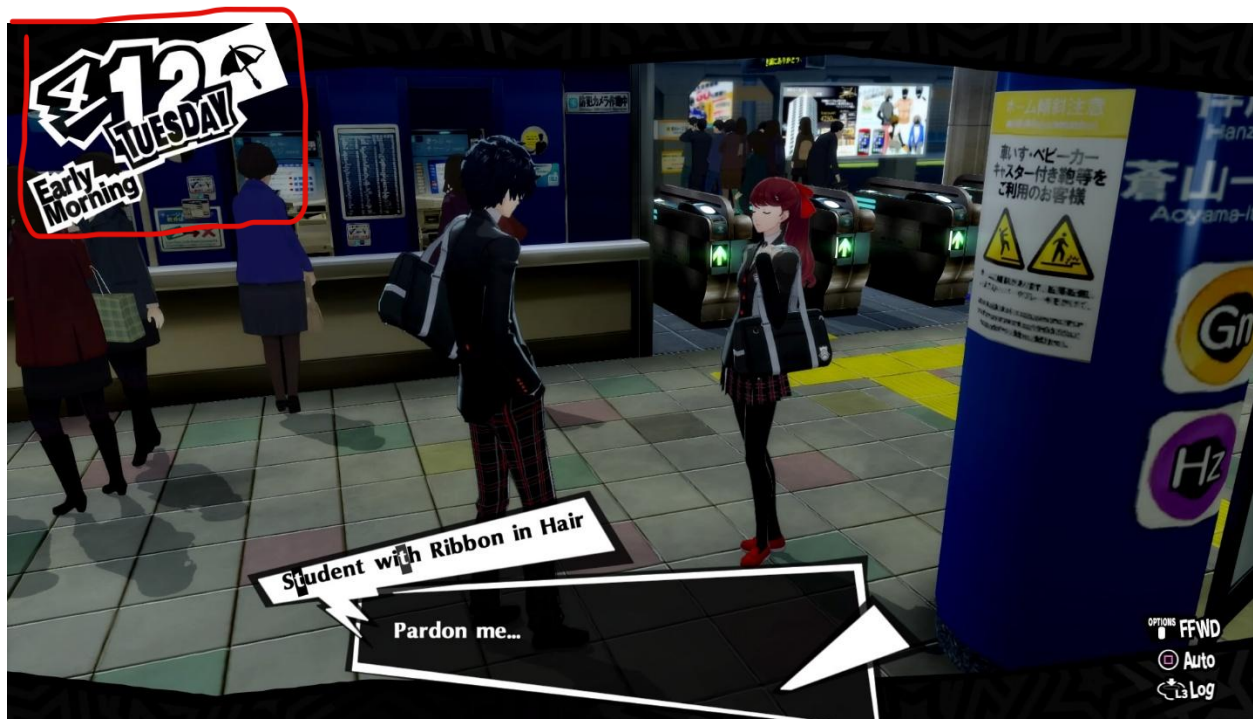

Noon is also usually busy on school days. During weekends and holidays the player can perform activities during noon.

Afternoon

The afternoon is always free. During this time club activities are available. The player can perform activities during the afternoon.

Night

Night is always available, except for the days before and after important narrative events, such as boss fights. During the night, the player can perform activities freely.

Not all actions are available every day. Some forced events or special days alter the calendar.

The player will have 2 to 4 actions per day to perform. But not all activities consume the same actions, some activities and quests may require 2 actions, as they take more time to complete. These activities will give a higher reward as they consume more actions, and the number of actions consumed by each mission and activity will be always indicated, to avoid mistakes.

Using public transportation (train) to move between districts consumes 1 action, which means that, if the player wanted to go to another district to perform activities during a school day, he/she would only have 1 action left to perform.

This is intended to balance and limit the player's progress in other parts of the map and focus on the area he has chosen from the beginning, being able to perform club activities, interact with NPCs or perform other types of missions and still have 1 action left per day.

The player will be able to use public transportation for free (without spending actions) once he obtains the Express Pass item, allowing him to move freely between districts. This item will be granted late in the game to open up exploration and interaction possibilities to the player.

Missions System

The missions that can be performed within the game are categorized into several types, according to their importance:

Events

They consume daily actions (1 or 2 depending on the type of event). Activities such as attending a club, going to the gym or hanging out with an NPC consume 1 action.

Special events such as increasing the friendship level with an NPC to 7 consume 2 actions, as they are events of higher importance. On occasions such as rainy afternoons you can also choose to spend extra time in the library and further increase your stats (this is an example).

Not all activities are available in all 4 districts, events like clubs are exclusive to the chosen school.

But the 4 districts are balanced in terms of gaining stats. There will always be an upgrade option for each minimum statistic in each district. For example: a district that lacks a club that increases the strength stat, may have facilities such as a gym, where you can increase that stat.

Among the types of events is the Allies Event, which consists of some days of the week you will have the option to accept an event with that character, spending an action of the day. These events advance in the personal plot of that NPC, giving you to know better his history and evolution of the character as you talk to him. You will be able to increase the level of affection more quickly and effectively if you answer correctly to the dialogue options when you meet that NPC or giving them gifts when you meet them. Levels go from 1 to 10, and as you increase, you will unlock passives (or skills if they are companions) exclusive to that character. For example, a partner can learn a new skill for combat, or you can get discounts if the ally is the owner of a store.

They are accepted as assignments from other NPCs.

They do not consume daily actions. Some side quests have a deadline. Once the deadline has passed, the mission cannot be completed.

These quests do not directly affect the development of the plot. Whether the player completes them or not, the story will develop in the same way. They facilitate the player's growth within the game, apart from providing extra content.

PLAYER

Choice of Protagonist type

It has been decided to use a Customizable Character Avatar, giving the player agency to decide the attitude and Point of View of the character in the narrative, but with a preset appearance and background.

This helps to give more controlled agency to the player, since all possible options are preset. Since appearance and background are already defined from the very beginning, it is useful when it comes to immersion within the narrative, since it provides the player with a character that from the very beginning fits perfectly visually and in the narrative of the story, making it much more believable. The empty and simple past of the protagonist makes it easy for players to empathize with the character, as through this avatar they will interact with the world, and with the agency and freedom provided by the game ensures an immersive and entertaining experience.

Good examples of this are games like Persona, or Fire Emblem or Detroit Become Human.

Player Evolution in the Narrative

Since it is an RPG, you should see a clear evolution of the character within the narrative. This is visible both in and out of combat. This is achieved through the combination of the systems of missions, allies and statistics, which combined make visible a clear evolution of the player himself (he becomes stronger by increasing his statistics, he also unlocks new interactions as he improves as a person), it is also reflected in other characters, as the friendship with them increases, they will also evolve. It is also seen in the exploration, since as the game progresses the player will be able to access more areas of the city. In combat he will also become stronger, obtaining new skills and equipment that will allow him to take his abilities to their maximum potential. The player's decisions when interacting with characters and in certain moments of the story will decide the final outcome of the narrative, so the player's agency also affects the evolution of his character.

The more the player gets involved with the world, doing quests, interacting and exploring, the more noticeable the evolution of the character will be and the stronger he/she will become.

Stats system

The statistics will mark who the player is both in and out of combat. They affect your relationships with other students, what activities and missions you can perform and how you deal with the challenges of the school world. Each stat represents an aspect of your personality and fighting style. In order to advance in the narrative of certain allies and participate in certain missions, the player will be required to possess a certain value of some stat, preventing their advancement until they reach that level.

They can be improved in several ways:

Using certain weapons in combat improves mastery with them. Joining clubs improves stats depending on the club. Completing quests and interacting with other characters are ways to improve the player's stats.

These are:

Charm

- Charisma and social skills.
- Improves the effectiveness of support skills and increases the effectiveness of social interactions.

Strength

- Physical strength.
- Improves the use of heavy weapons and strong blows.

Proficiency

- Your dexterity, technique and precision.
- Improves the use of light weapons and combos.
- Important for styles based on speed and refined technique.

Spirit

- This is directly related to the character's SP (Spirit Points).
- This statistic is basically the character's mana.

Endurance

- This is the physical resistance of the character. It directly affects the player's HP.

Ingenuity

- Strategy, creativity, use of technology and challenge resolution.
- Improves the use of tools and gadgets in combat.

Willpower (Average among all)

-This statistic prevents the player from upgrading only to 1 statistic only, because if he has several at low level his average will be low. It serves to have a moderate and controlled progression in the game.

Equipment system

The player will have an inventory where to store all the objects obtained during the game. It has unlimited space.

The inventory is not accessible during combat, for this a radial menu will be provided that the player can quickly open during combat and select 1 of 6 items that can be customized and equipped in the radial menu.

This greatly facilitates the use of items during combat, such as healing or buffs. It would work similar to the radial menu of the Monster Hunter games.

Within the different types of Items, these are divided into different categories, each with its own section in the inventory.

Equipment:

These are the items the player can equip. They come in three types:

Outfits: Clothing that the player can acquire by completing missions, purchasing from shops, or as loot from chests. Outfits provide stat boosts (depending on the outfit) and change the visual appearance of the player's avatar. A specific outfit can also be selected purely for aesthetic purposes, allowing the player to customize their character's look without affecting their stats.

Weapons: Weapons are the core of combat, as different weapons offer different combat styles and scales with different stats. They function similarly to class systems in more traditional RPGs. Weapons can be obtained in the same way as outfits.

Amulets: Amulets provide passive abilities and stat boosts, offering small buffs to aid the player in combat. They are acquired in the same manner as the other two equipment types.

Some of these items (outfits, weapons, amulets) require the player to meet minimum stat thresholds to be used.

Consumables:

Consumables are single-use items that the player can use to gain a specific effect or bonus. These range from healing items, temporary combat buffs, gifts for NPCs, and stat enhancement vials (which increase a specific stat by 1 point).

Key Items:

Key items are non-transferable objects that have a direct connection to the game's narrative. They are given to the player at predefined points in the story and serve as a physical representation of their progress, allowing access to new locations or unlocking new activities.

Skill Tree

The player will also have access to a skill tree, where they can acquire new attacks, abilities, and passives that will be useful both in and out of combat. The skill tree is a menu in which several star-shaped branches extend from an icon representing the player, showing their Willpower stat (the average of all stats). There is one branch for each stat. To progress through the skill tree, the player must increase their stats.

To unlock levels within the skill tree, the player will be required to have a minimum value in the corresponding stat. In some cases, unlocking a certain node may require minimum values in multiple stats, encouraging the player to diversify their stat growth rather than focusing on just one.

There are several types of abilities:

Passive Ability:

These do not require any input to activate; they are triggered automatically when certain conditions are met. They can have effects both inside and outside of combat.

Attack Ability:

Basic attacks that the player can perform during combat to fight enemies. When these attacks are executed consecutively and without interruption, they are considered Combos. The combo value increases with each successful consecutive hit.

The player can equip up to four attack abilities.

Active Abilities:

These are powerful abilities that the player can activate by pressing the designated input (by default, the Left Trigger). Doing so temporarily replaces the equipped attack abilities with four active abilities.

This system functions similarly to the skill input system in Granblue Fantasy: Relink. Active abilities are powerful moves with longer cooldowns. They can also be used to extend combos.

COMBAT

The combat in this game aims to resemble a Beat 'em Up. Taking references from games like the Yakuza saga, Granblue Fantasy Relink, and SIFU. Combat is the element that strays the most from the real world, as the imagination of the characters will give rise to abilities and attacks with special effects taken from a comic, and abilities that would be impossible to perform in the real world, but they integrate perfectly with the comic-style aesthetic of the game.

Example: An Uppercut with an animation of a fire dragon. The intention is for the fights to look like they were taken from a comic or cartoons.

Fights are triggered at specific moments during events or when coming into contact with members of a rival gang while exploring the map (similar to how street fights occur in Yakuza).

Upon entering combat, the player will enter a prefabricated scene to make it easier for the designer to control the flow of the fight at all times.

All characters in combat have a posture bar, which will fill up as they take hits and decrease when landing a hit or after a period without taking damage. If this bar fills, that character will be immobilized for a few seconds. (Similar to the posture bar in SIFU or Sekiro).

Allies in Combat

When it comes to combat, you won't be alone. You can have up to 3 companions by your side to assist you in combat. These companions have unique abilities and combat styles, and they will improve through interactions with them.

They will engage enemies directly during the fight, allowing you to have better control of the fight despite multiple enemies on screen, as they will take care of several.

Combined Attacks

During combat, hitting enemies, defeating them, and increasing your combo level will gradually fill the motivation bar.

The motivation bar allows the player to perform combined attacks between all team members. These are extremely powerful attacks with different effects in combat, depending on which ally companions are in the fight. The more companions that participate in the attack, the greater its effectiveness.

Street Fights

While exploring the map, you will encounter rival gangs looking for a fight. Upon contact, a street fight will begin. These are not very complicated fights and mainly serve for the player to improve their stats, try out combat techniques, and change the exploration dynamic so that it's not just exploration or just combat.

Event fights are designed to provide combat experience and challenge for the player, with boss fights being the pinnacle of these events.

Boss Fights

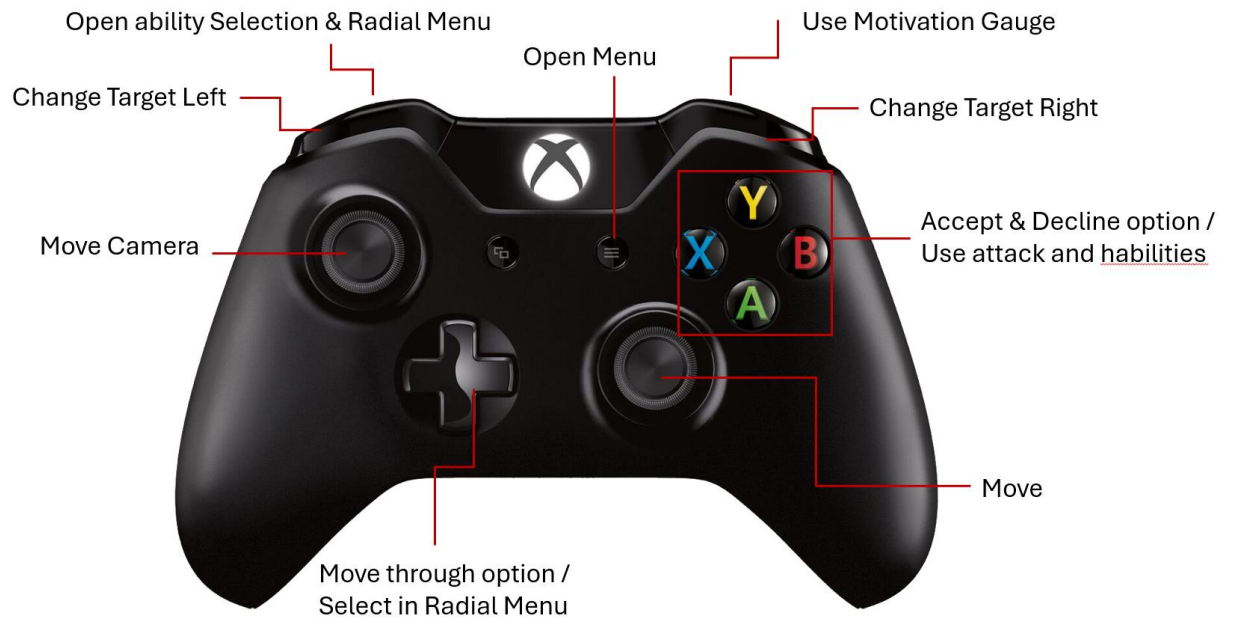

Boss fights will test the player's skills and level in a much more complete combat experience than all the others, with narrative implications that will push the story forward. These fights can be team-based or individual if it's a fight against a gang leader. These will be considered duels, consisting of a one-on-one battle between the leader and you, with no minions or allies involved. This forces the player to step out of their comfort zone and find new strategies to overcome the fight.

The boss fights are inspired by the video game SIFU and will take place in special arenas themed for each boss.

CONTROLS

The game is designed to be primarily played with a controller, but a port to mouse and keyboard could be made.

These controls can be modified and adjusted to the player's personal preference. These are just the predefined controls, following the standards used by other similar games in the industry, to provide the majority of players with an intuitive and familiar control experience.

NPCs

Types of NPCs

Companions

Companions are NPCs exclusive to the school you have chosen.

These are characters with whom the player can interact and increase their affection level. This is achieved through ally events.

Companions will also assist you during combat. These characters will fight by your side if you have selected them as part of your team. You can take up to 3 allies with you.

Allies

Allies are characters with whom the player can interact and increase their affection level. These can range from students at the player's school or rival schools, to store clerks or security guards at the train station.

In order to form a friendship with some allies, it is necessary to join the same club as them, as many times their backstory will develop through the club's activities.

Some ally characters can become companions, depending on the school the player chose at the beginning of the game, while other possible options will be available as allies.

Passersby

Passersby are generic NPCs that help bring the city to life and prevent it from feeling empty. They are also the ones who typically give the player side missions, although they can also be allies in some cases.

There are characters, like teachers, who have narrative significance, but you cannot interact with them on the same level as allies. They exist solely for narrative purposes, not gameplay ones.

Character Variety and Balance

The available characters as companions vary depending on the chosen school, as do the characters with whom you can build friendships. To ensure no district is ahead of the others, all will have the same basic elements for the protagonist's development:

Same number of companions. Within the possible companion options, there will be archetypes that ensure balanced combat. Every school will have one companion fulfilling the tank role and another focused on support but tailored to the school's style. The rest will vary by school, focusing on a specific combat style (martial arts, gadgets, freestyle, etc.).

This also affects the allies; there must be the same number of characters to interact with in all districts, ensuring that time management is similar across the board. Each region will have a specific ally in charge of an establishment (shop). The remaining allies will be themed according to each region, but each zone will be balanced along with the event system (providing the same opportunities between allies and events for obtaining resources and statistics in each district).

Examples of Characters

District Zenith

Mina (Companion)

Statistic: Ingenuity

Appearance: Short girl, short hair, always wears VR glasses on her head and carries a bag of tools to repair “F.R.I.E.N.D.” (Fully Responsive, Intelligent and Emotional Drone).

Personality: Shy, messy, sarcastic, doesn't trust people easily, but extremely outgoing with those she does trust.

Lore: She's always liked machines more than people; they're easier to deal with. She's the only member of the Robotics Club and is looking for new members to keep it from being shut down. She will need your help to create her secret project: a perfect AI, capable of reasoning and having feelings.

In Combat: Uses gadgets and turrets to provide buffs/debuffs (Support). If you max out your friendship with her, she will summon F.R.I.E.N.D. to assist in battle. F.R.I.E.N.D. is a humanoid robot that will help in combat.

Kenji (Companion)

Statistic: Proficiency

Appearance: Slim, wears an Esports T-shirt from his favorite team.

Personality: Competitive, friendly, extremely passionate about video games.

Lore: Obsessed with status in video games, he's dedicated his life to being the best. His arc revolves around discovering that there is more to life than games and competitiveness—learning how to lose.

In Combat: Playing games all his life has helped him develop outstanding reaction skills, making him very agile. If you max out your friendship with him, he will grant you the ability to predict strong enemy attacks (similar to Spider-Man's spider sense).

Riko (Companion)

Statistic: Endurance

Appearance: Tall, muscular, with a bionic arm that he modified himself.

Personality: Cheerful, optimistic, friendly.

Lore: He lost his arm in an accident when he was young, but saw it as an opportunity to put his knowledge into practice. He learned how to modify the bionic arm to suit his needs.

In Combat: He uses his modified arm both defensively and offensively. If you max out your friendship with him, you'll unlock the ability "Let Me Lend a Hand," which allows him to propel his arm and throw it as a projectile, knocking down enemies in an area.

Vanguard District

Makoto (Companion)

Statistic: Proficiency

Appearance: Long hair, very elegant, with a firm gaze.

Personality: Disciplined, always wears traditional Japanese clothing. Believes she is a samurai.

Lore: Since she was young, she has always admired samurai stories and hates movies because they tarnish their image. She has always dreamed of being a samurai and dedicates her life to it, even though she thinks it's an impossible dream. She is a member of the Kendo club, and her grandfather is the instructor, whom she greatly respects.

In Combat: She uses quick attacks and a succession of sword combos that leave no room for the enemy to react. If you improve your friendship to the maximum, she will allow the player to perform a parry if they hit the enemy just before being struck by an attack, performing a perfect counterattack.

Minato (Companion)

Statistic: Spirit

Appearance: Long hair always tied up in a traditional Japanese bun, serene.

Personality: Tempered, patient, finds his inner peace by drawing his bow.

Lore: As a child, he had many issues with anger. His parents enrolled him in a Kyudo school to help control his temper, and he ended up falling in love with the sport. Member of the kyudo club.

In Combat: He keeps his distance from enemies and attacks using charged shots, which, although slow, deal significant damage. If you improve your friendship to the maximum, he will allow the whole team to recover a small amount of HP at the end of combat.

Marcus Lee (Ally)

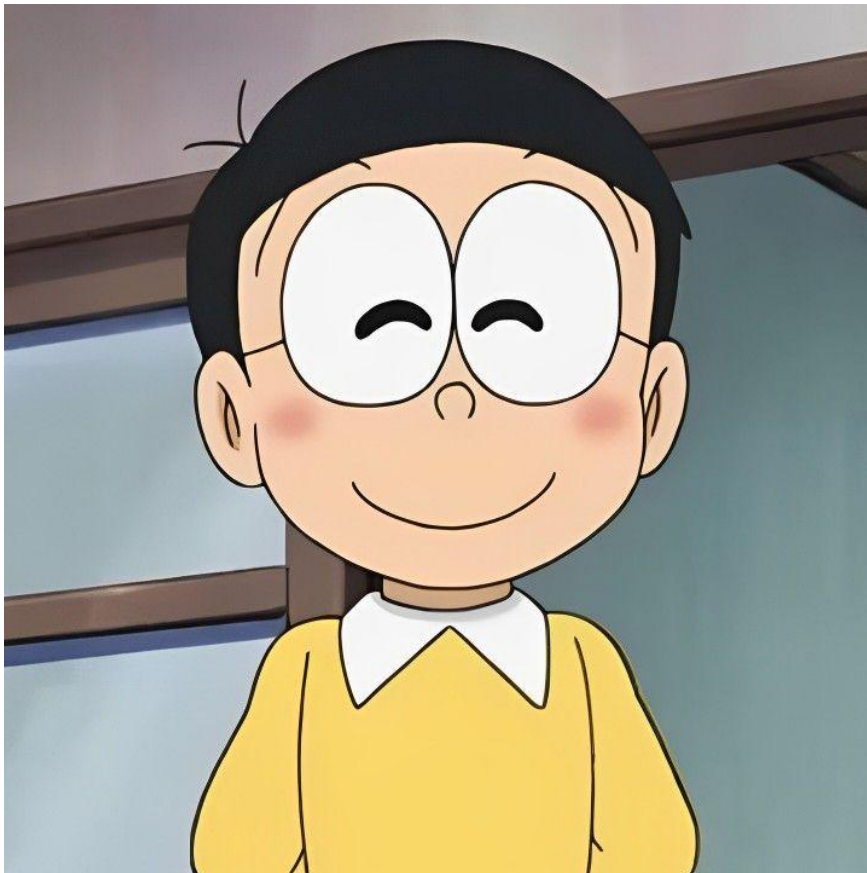

Statistic: Ingenuity

Appearance: Glasses, short, slim.

Personality: Reserved, fascinated by the worlds created in books, dreams of becoming a writer.

Lore: He comes from a strict family that prioritized studies over his social life. Now, he lacks social skills and finds refuge in books. He wants to be a writer but is too shy for others to read his books.

Unlocks: By improving your friendship to the maximum, he allows the player to read books twice as fast, rounding the time up (from 4 actions to 2, from 5 to 3, etc.).

Debonair District

Vibe (Companion)

Statistic: Charm

Appearance: Dark skin, braids, carries his guitar everywhere.

Personality: Extremely extroverted, a ladies' man, wants to be a singer.

Lore: He wants to show the world, and especially his older brother, that he has musical talent and is not just known because of him. He wants to win the local hip-hop tournament to prove what he's made of.

In Combat: He does not participate in the battle; he stays at a distance playing melodies that provide buffs/debuffs. If you max out your friendship with him, he slightly increases the amount of friendship you gain when you respond correctly to an ally in an ally event.

Stitch (Companion)

Statistic: Proficiency

Appearance: Slim but toned, elastic, wearing ripped and colorful streetwear.

Personality: Outgoing, expresses herself better through dance than words, hates studying.

Lore: Stitch has always been drawn to the energy of the streets and the rhythm of hip hop culture. From a young age, she immersed herself in breakdancing, mastering the art to the point where it became her primary form of expression. She comes from a family who didn't understand her passion, but that only fueled her drive. Despite struggling with academics, Stitch found her true calling in the world of dance, determined to prove that creativity and movement can be just as powerful as books and grades.

In Combat: She moves with a unique style that combines breakdancing and acrobatics, attacking opponents in unexpected ways. If you max out your friendship with her, she increases the player's attack damage for every consecutive hit landed in an uninterrupted combo.

Blaze (Ally)

Statistic: Strength

Appearance: Spiked hair, 80s rocker look, threatening.

Personality: Aggressive, protective, determined.

Lore: Blaze despises the educational system and dropped out of school to dedicate her life to leading a gang of delinquents in the Debonair District. Although she projects a tough, fearsome image to command respect and instill fear in her opponents, she's actually a good person who cares deeply for those she considers her family. People in her area look up to her like a godmother figure, and whenever someone has a problem, they go to her for help. Over time, with your assistance, she comes to realize the value of education and decides to enroll in an academy to finish her secondary education.

Unlock: You will be able to move freely throughout the Debonair District without restrictions.

Moonfare District

Lira (Companion)

Statistic: Endurance

Appearance: Silver-gray eyes, always neat and clean clothing in shades of blue and white.

Personality: Elegant, serene, very observant. Always tries to understand both sides of a conflict.

Lore: Always advocates for justice, unable to understand the reason behind the conflict between factions. Alongside the player, she will learn that sometimes allowing emotions to guide decisions rather than logical thinking, and tilting the balance toward one side, isn't wrong, it's human. Member of the costalero club.

In Combat: Fights with the full weight of justice. If you max out her friendship, it unlocks the "Fair Play" ability, which divides the lethal damage the player would have taken equally between the player and the attacker (activates if the player is about to die from a single hit).

Sage (Companion)

Statistic: Spirit

Appearance: Green eyes, clothing in shades of lilac and light blue, adorned with amulets.

Personality: Cheerful, spontaneous, positive, and very honest (no filter).

Lore: At first, she seems like a distracted person obsessed with superstition, but as you deepen your friendship with her, she reveals that her interest in the spiritual stems from a personal loss she hasn't been able to overcome. She found comfort in the supernatural to make sense of it. Member of the occult club.

In Combat: All her attacks and abilities consume SP. Some of her abilities restore SP if they hit. If you max out her friendship level, she unlocks the "Future Prediction" ability at the start of combat, a random tarot card is drawn, granting a unique buff for the battle (one for each tarot card).

Leo (Ally)

Statistic: Strength

Appearance: Intense amber eyes, always wearing a fur coat resembling a lion's mane.

Personality: Kind, cowardly, dislikes fighting, can't control himself when he gets angry.

Lore: He is the leader of the Moonfare District gang, but not by choice. He was chosen as leader because he's the strongest person in the entire district, but despite his strength, he dislikes hurting others. He's in love with the leader of the Debonair District (Blaze), whom he admires for her bravery, determination, and natural leadership.

Unlocks: The ability to move freely throughout the entire Moonfare District.

Commercial District

Jerry (Ally)

Appearance: Average worker, always wears his work uniform.

Personality: Jokester, tired of his job, bored and looking for company.

Lore: Jerry works at the train station in the Commercial District as a security guard. After so many years, the job has become monotonous and dull. He's looking for someone to keep him company.

Unlocks: He'll give you hints about points of interest across the map and where to find key NPCs important to the story. If you max out his friendship, he'll give you the Express Visa, an item that allows you to use the city's transportation (train) without consuming an action.

Interactions with Jerry are limited during the main story, reaching maximum friendship with him will only be possible around the halfway point of the game.
